

Aston Martin DB7 V12 Vantage

This rarified colour DB7 V12 Vantage is very much an attention grabber not being grey or silver!

An metronomic and stella history also cannot fail to impress

The colour termed "Thursso Red" is striking, and as in layman's view is Maroon or Plum but definetly rare as very few were made, so the car has that rarity factor as well as stand out!

The service history is very good and nearly all Aston main dealer with a couple being specialist

In addition there has been significant expenditure incurred to a value of approximately £16000 including a replacement diff, upholstery work and paint protection undertaken and more.... mostly by Aston.

A truly special example - if you're going to have an AM Vantage have a v12 and one that is not run of the mill
